CHANGING THE SHAPE OF SOCIETY WITH AUTOMONOUS VEHICLES

In the future, the driving environment will be monitored by autonomous vehicles. Automation will significantly reduce harmful emissions, and the driving experience will be transformed. People will be able to use in-vehicle content for entertainment, working, and knowledge storage. A new lifestyle will be introduced to the world.

The driving environment will be changed with autonomous vehicles. There will be increased flexibility and decreased dependence on urban infrastructure. In 15 years, the road will be dominated by autonomous vehicles, and the car will be more efficient.

The percentage of autonomous vehicles on the road will increase to 65% in 2020. The future of cars will be changed, and the current car market will be 25% of the new car market. The future of driving will be enjoyed by more people.

The driving environment will be changed with autonomous vehicles. There will be increased flexibility and decreased dependence on urban infrastructure. In 15 years, the road will be dominated by autonomous vehicles, and the car will be more efficient.

The percentage of autonomous vehicles on the road will increase to 65% in 2020. The future of cars will be changed, and the current car market will be 25% of the new car market. The future of driving will be enjoyed by more people.
